#### **DETAILED ACTION**

## Response to Amendment

Claims 1, 2, 4, 15 and 17 have been amended. Claims 12-14 and 16 have been canceled. Claims 21-23 have been newly added.

# Claims 1-11, 15 and 17-23 are pending.

#### Response to Arguments

1. Applicant's arguments, see Remarks pages 11-13 filed 11/27/2006, with respect to the rejections of claims 1, 6 and 15 under 35 U.S.C. 102(e) and 35 U.S.C. 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of *Sears*, *Jr. et al* (US 6,934,736).

## Claim Rejections - 35 USC § 103

- II. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- III. Claims 1-5 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sears, Jr. et al (US 6,934,736) in view of Narin et al (US 7,039,699).
- a. Regarding claim 1, Sears, Jr. et al teach a method of requesting a resource having a URL from a WEB server, comprising:

- a Web client transmitting a first request to a remote computer for a cookie that is valid for the URL (Abstract, Figures 3 and 4, col.9 lines 4-11, col.11 lines 61-63—client request cookie associated with a selected website from the cookie server); then
- a Web client receiving a first cookie from the remote computer (col. 2 lines 45-49, col. 9 line 28-col. 10 line 2—the client receives a cookie from the cookie server); and
- a Web client transmitting both the first cookie and a request for the resource to the WEB Server (Figure 3, col. 2 lines 49-51—client then connects to the website and provides the cookie to the website).

Sears, Jr. et al's teaching of connecting to the desired website and providing the cookie to the website implies that the website request and the cookie are both sent to a web server in order to access a customized resource from the website (col.11 lines 56-60). Nonetheless, Narin et al, explicitly teach that the client includes the cookie in the request for content to the web server (col.4 lines 14-17, col.9 lines 62-67, col.10 lines 23-31, col.13 lines 38-43).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of *Sears, Jr. et al* with *Narin et al* for transmitting a cookie with the request for a web resource, in order to customize the requested web document accordingly with the user's information.

- b. Claim 21 contains limitations that are substantially equivalent to claim 1 and is therefore rejected under the same basis.
- c. Regarding claim 2, Sears, Jr. et al with Narin et al teach the method of claim 1, Narin et al further teach the method further comprising: the Web client receiving input from a user defining the URL; and wherein the first request transmitting step is automatically performed in response to receiving the user input (col.9 lines 51-57).

Art Unit: 2141

d. Regarding claim 3, Sears, Jr. et al with Narin et al teach the method of claim 2,

Page 4

wherein the first request transmitting step is performed by transmitting the first request over a

network to the remote computer (Sears, Jr. et al: col.9 lines 4-11, col.11 lines 61-63; Narin et al:

col.9 lines 51-57).

e. Regarding claim 4, Sears, Jr. et al with Narin et al teach the method of claim 1,

Narin et al further teach the method further comprising: the WEB client receiving the resource

and a second cookie from the WEB server; and in response to receiving the second cookie, the

WEB client transmitting the second cookie to the remote computer for storage (col. 11 line 66-

col.12 line 10).

f. Regarding claim 5, Sears, Jr. et al with Narin et al teach the method of claim 4,

wherein the network comprises the INTERNET (Sears, Jr. et al: col.5 lines 23-25; Narin et al:

col.7 lines 25-38, col.8 lines 58-60, col.9 lines 15-25).

IV. <u>Claims 6-11, 1517, 22 and 23</u> are rejected under 35 U.S.C. 103(a) as being unpatentable over *Sears, Jr. et al* (US 6,934,736) in view of *Narin et al* (US 7,039,699) in further view of *Oustrans et al* (US 6,748,420)

further view of Quatrano et al (US 6,748,420).

a. **Regarding claim 6**, Sears, Jr. et al with Narin et al teach a computing device,

comprising:

• means for receiving a first cookie that is valid for a first range of URLs from a first WEB client (Sears, Jr. et al: col.2 lines 45-49, col.9 line 28-col.10 line 2; Narin et al: col.9 lines 51-57, col.13 lines 7-18—the client receives a cookie from

the cookie server for a first website—Narin et al teach the use of domain cookies);

• means for receiving a first request for a cookie that is valid for a first URL (Sears, Jr. et al: Abstract, Figures 3 and 4, col.9 lines 4-11, col.11 lines 61-63—client

request cookie associated with a selected website from the cookie server);

• and means for responding to the first request by transmitting the first cookie (Sears, Jr. et al: Figures 3 and 4, col.2 lines 45-49, col.9 line 28-col.10 line 2 Narin et al: col.11 line 66-col.12 line 10).

Yet Sears, Jr. et al and Narin et al fail to explicitly teach receiving a first request for a cookie from a second WEB client, and transmitting the first cookie to the second WEB client if the first URL is within the first range of URLs. However Quatrano et al teach the sharing of cookies among a group of web clients, wherein a cookie for transmitted to a first user may also be sent to a second user upon request for the URL (col.7 lines 26-col.8 line 52, col.9 lines 16-43, col.15 lines 27-42, col.16 lines 1-7, col.21 lines 45-57, col.22 lines 45-54, col.23 lines 41-60, col.24 lines 41-55).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of *Sears*, *Jr. et al* and *Narin et al* with *Quatrano et al* in order to provide shared access of a website to multiple users, by permitting the sharing of cookies from one client to another without compromising the privacy of each client's information.

- b. Claims 9, 10 and 22 are substantially equivalent to claim 6 and are therefore rejected under the same basis.
- c. Claims 15 and 23 contain limitations that are substantially equivalent to claims 1 and 6 and are therefore rejected under the same basis.

Art Unit: 2141

d. Regarding claim 7, Sears, Jr. et al and Narin et al with Quatrano et al teach the computing device of claim 6, Quatrano et al further teach wherein the first WEB client and the second WEB client are two different computing devices (col.5 lines 26-30).

Page 6

- e. Regarding claim 8, Sears, Jr. et al and Narin et al with Quatrano et al teach the computing device of claim 7, Quatrano et al further teach wherein the first cookie receiving means is configured to receive the first cookie from the first WEB client over a network; and wherein the first request responding means is configured to transmit the first cookie to the send WEB client over the network (col. 16 lines 1-7, col.21 lines 45-57, col.22 lines 45-54, col.23 lines 41-60, col.24 lines 41-55).
- f. Regarding claim 11, Sears, Jr. et al and Narin et al with Quatrano et al teach the computing device of claim 10, further teach wherein the network comprises the INTERNET (Sears, Jr. et al: col.5 lines 23-25; Narin et al: col.7 lines 25-38, col.8 lines 58-60, col.9 lines 15-25).
- g. Regarding claim 17, Sears, Jr. et al and Narin et al with Quatrano et al teach the system of claim 15, Narin et al further teach the system further comprising a monitoring device operable to monitor a first device to detect when the device generates a pre-defined signal and to respond thereto by generating a notification that the signal was generated; and wherein the first WEB client and the second WEB client are operable by a user to retrieve the notification (col.4 lines 10-22 and 62-67, col.9 lines 57-67, col.10 lines 14-22).
- V. <u>Claims 18-20</u> are rejected under 35 U.S.C. 103(a) as being unpatentable over *Sears*, *Jr. et al* (US 6,934,736) and (US 7,039,699) in view of *Quatrano et al* (US 6,748,420) and further in view of *Silverbrook et al* (US 6,813,039).

Art Unit: 2141

Page 7

a. Regarding claim 18, Sears, Jr. et al and Narin et al with Quatrano et al teach the system of claim 17, as applied above, yet fail to teach a printer. However, Silverbrook et al teach a printer wherein the sensing device that monitors the status of the printer (Abstract, col.24 lines 6-8). It would have been obvious to one of ordinary skill in the art at the time the invention

was made to combine the teachings of Sears, Jr. et al, Narin et al and Quatrano et al with

Silverbrook et al by having a monitoring device for a printer; because this allows the users to

monitor the printer's status to determine when maintenance is required.

b. Regarding claim 19, Sears, Jr. et al, Narin et al and Quatrano et al with

Silverbrook et al teach the system of 18, Silverbrook et al further teach the system comprising:

the printer; and wherein the printer includes a replaceable consumable cartridge; and wherein the

printer is operable to generate the signal when a consumable in the cartridge moves below a pre-

determined level (col. 23 line 50).

c. Regarding claim 20, Sears, Jr. et al, Narin et al and Quatrano et al with

Silverbrook et al teach the system of claim 19, Silverbrook et al further teach wherein the printer

is a laser printer (col. 15 lines 30-32).

# Conclusion

VI. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Purpura (6,421,768), Greene et al (2002/0143861), Grandcolas et al (7,137,006), Andrew et al (2002/0073152).

Art Unit: 2141

VII. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Kristie Shingles whose telephone number is 571-272-3888. The

examiner can normally be reached on Monday-Friday 8:30-6:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

Page 8

supervisor, Rupal Dharia can be reached on 571-272-3880. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR`

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
